GAME SCREEN

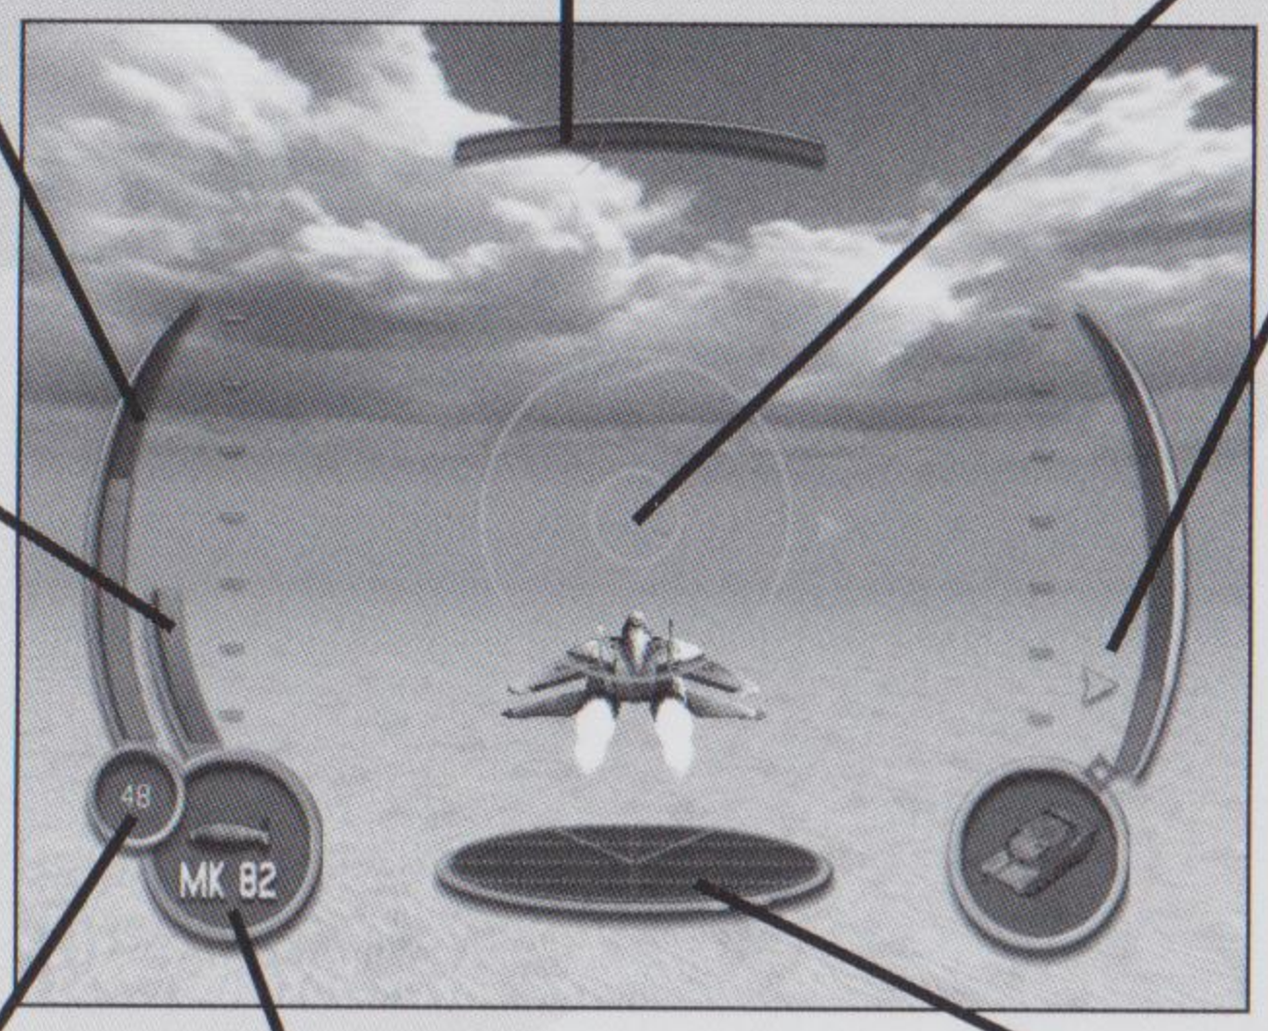
The various on-screen gauges and icons in your cockpit display information vital to helping you make it through the missions alive. Here's the lowdown on what they all mean…

Speed
This meter shows how fast you're flying. It rises to the halfway mark when the engines hit top speed, but you can go even faster and fill the meter by using the Afterburner.

Health
This gauge shows the F14-Tomcat's health. If it empties… well, you better take some extra flying lessons!

Targeting Sight
The orange arrow indicates where an enemy is located. If your weapon is over a target then it changes to red.

Afterburner
This gauge shows how much Afterburner you have. It drains when you press the ⊗ **button**, but fills back up again if you ease off the Afterburner for a short period of time.



Altitude
The altitude gauge shows how high you're flying. Pull up if the meter gets too low or you'll crash into the ground!

Weapon Ammo
This number indicates how many rounds of ammo the current weapon has loaded. If it falls to zero, you'll need to select a different weapon.

Weapon
This icon tells you which missile or bomb is currently selected. You can always fire the Vulcan cannon no matter which other weapon is selected.

Radar
The radar shows you the location of allies and enemies. Allies are coloured green and enemies are coloured red.
